

1. Github usernames: besher-alsabbagh and talakarraz
2. Group Name: Testify <https://github.com/besher-alsabbagh/Testify>
3.
Choice 1: Markor <https://github.com/gsanter/markor> ,Tala Karraz
Choice 2: AmazeFileManager <https://github.com/TeamAmaze/AmazeFileManager> ,Besher AlSabbagh

4. (Total: 14 points) Why did your group select this project? Explain the reason in terms of the criteria below:

(2 points) Ease of use:

Tala: Markor is easy to use because it has a simple interface. Users can create and edit text files, take notes, and make to-do lists. I installed and opened the app using Android Studio, and the main features were easy to find and understand.

Besher: Amaze File manager is an easy to use file manager. I picked it because it has a lot of functionalities like: copying, moving, deleting, compressing, and extracting files which allows for easy testing since you can test each of those criteria separately. Yes I could run the app on Android Studio on my laptop.

(2 points) Existing Tests: Does the project contain any test cases?

Tala: Markor contains existing test cases. The project has a test folder with Java test files, such as TextViewUtilsTest.java. These tests help check that some parts of the application work correctly.

Besher: Yes, in the path app/src/test/java/com/amaze/filemanager relative to the repo there's multiple tests that include application testing, asynchronous testing, database testing , file system testing, UI testing , and Utils testing.

(3 points) Popularity: How many stars does the project have on GitHub?

Tala: Markor has approximately 6,200 stars on GitHub as of October 8, 2026. This shows that the project is popular and has attracted interest from many developers.

Besher: Amaze File Manager has around 6,400 stars on GitHub.

(1 point) Is the project available for download in Google Play? If yes, what is the number of downloads in Google Play? If no, give any data that shows the popularity of the app (for example, is it available in F-Droid?)

Tala: Markor is available on Google Play and has over 100,000 downloads. It is also available on F-Droid.

Besher: Amaze File manager is available on F-droid and Google play with over 1 million downloads there.

(2 points) Actively Maintained: When was the latest commit to the project?

Tala: Markor is actively maintained. The latest commit was on August 24, 2026, which is within the past year. This shows that developers are still working on the project.

Besher: The last commit on Amaze File Manager was made on the 23rd of September 2026.

(1 point) Likelihood of finding new bugs: How many bug-related (e.g., with label “bug”) GitHub issues does the project have?

Tala: Markor has 117 bug-related issues on GitHub.

Besher: Over its life Amaze File manager had 893 issues labeled bugs.

(2 points) How many of these bugs-related issues have been resolved/closed?

Tala: Out of the 117 bug-related issues, 113 have been closed. This shows that the developers resolve most of the reported bugs.

Besher: Out of the 893 issues labeled 594 have been closed with 299 remaining open however the latest closed issue is marked August 1st meaning the devs are still trying to maintain the app.

(1 point) What are the lines of code (LoC) in the project?

Tala: Markor has 1,783,217 lines of code, according to the Statistic plugin in Android Studio.

Besher: Amaze File Manager has a total of 126,046 lines of code mostly of Java and Kotlin.

(1 point) What tool did you use to measure the LoC?

Tala: I used the Statistic plugin in Android Studio to measure the lines of code in Markor.

Besher: I used the Statistic plugin to give me the total lines of code in the Amaze File manager repo I cloned.
